Reasons For Allowance

The following is an examiner's statement of reasons for allowance: Claim 1 is allowable over the prior art because it recites the use of a second pillow case that has a strap portion with a hook and loop fastener that is attached removably connected to the gathered portion of the first pillow case. These particular elements are not shown or suggested by the prior art of record. The closest reference found is the cited patent to Powell (US 941,043) which shows a three piece support pillow somewhat similar to the claimed combination. A first and second pillow 1, 2 are joined to one another by a gathered portion 4 formed as apart of a common pillow case, with a third pillow 3 being attached to the case by a strap assembly 7. The strap 7 attached to the pillow case by a "Y" shaped end portion that connects adjacent to the gathered portion, but does not actually engage the gathered portion. The connection is permanent, and therefore there is no suggestion to make the strap removable from the assembly. Since the remainder of the prior art does not suggest or teach the use of a strap that would engage the gathered portion of a pillow case as a means for attaching one pillow to another the claims are allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Behar shows a cervical support device that uses two bolsters attached by hook and

loop fastener straps which are of general interest. Kelly shows a rearrangeable cylindrical support bolster of interest. LaRocca shows a sectional bolster that includes a necked portion that is of particular interest. Stokes, Parrish, Auracher, and Avery show multisection support cushion assemblies that show the general state of the art. .
